HISTORY

HOSET has been a leading supplier of furniture components and manufacturing services since 2002. The Belterno brand was founded in 2020 as part of the company's longstanding journey, specializing in artificial stone and HPL products. The brand name was derived from the Italian phrases «bella eternità» (beautiful eternity) and «bell'interno» (beautiful interior), reflecting the company's commitment to creating aesthetic and durable products for interiors.

In February 2021, a facility for processing «hard» materials such as sintered stone and quartzite was officially launched. The presentations of the Belterno brand, which took place in Vasylykiv in the summer of 2021, became an important stage in the promotion of the brand. In October of that year, a facility for processing «soft» materials, namely acrylic stone and HPL compact, was opened.

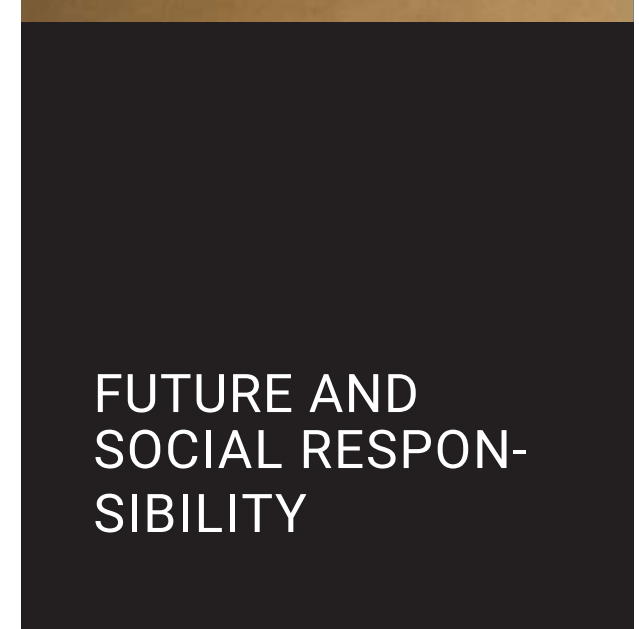

CHALLENGES AND RECOVERY

In April 2022, the Belterno brand quickly resumed operations, demonstrating resilience and dedication to its values. During this period, the company faced the necessity of completely restructuring its production processes and services to adapt to new realities. Despite all the challenges associated with the full-scale invasion in Ukraine, the team managed to update their work approaches to ensure the sustainable development of the brand.

TRANSFORMATION INTO HOSETSTONE

From September 2024, the Belterno brand will transform into the new trademark HosetStone. This transformation is part of HOSET's strategy to unify all production divisions under a single HOSET brand. The goal of this step is to create a cohesive and clear ecosystem for our partners and customers. HosetStone will become the new face of our company, reflecting all the achievements and experience accumulated over the years of working with Belterno. It will help us become even closer and more understandable to our clients.

FUTURE AND SOCIAL RESPONSIBILITY

Today, HosetStone continues to introduce market to the best global brands of artificial stone and HPL, developing the culture of working with these materials in the furniture industry. We support modern trends in furniture and interior design, helping our partners implement innovative ideas. HosetStone adheres to the philosophical principles of trust, honesty, efficiency, teamwork, and care for people. We continue to invest in development, processes, and mutually beneficial cooperation, creating long-term partnerships and ensuring high product quality.

PRODUCTION

EQUIPMENT

In the production of HosetStone products, innovative technologies and equipment from Breton S.p.A. are used. Breton machining centers are distinguished by their reliability, innovation, and high production characteristics. This allows orders to be fulfilled promptly and with impeccable precision.

LOCATION

The HosetStone production facility is located in Vasylkiv. The area of production premises is 2000 m². Clearly planned stages and production technologies, automated lines, and professionalism are the foundations of our work. Experienced craftsmen, who continuously improve their professional skills and control the quality of products at each stage, work on fulfilling the orders.

MATERIALS

Careful selection of raw materials for production is the foundation of a high-quality finished product that will serve you for years and meet all your needs. Therefore, we settled on global manufacturers – Spanish, Italian, Austrian, German and other recognized brands. Their products are chosen all over the world. That's why we also choose.

ADVANTAGES OF COOPERATION

1 TOP MATERIALS

HosetStone works with the best. Each of the materials is represented by top brands. The basis for choosing partners is the quality, innovation, and product range.

2 IDEAS WITHOUT LIMITS

We know no boundaries! Our experience working with various materials helps us find the perfect solution for your product, evaluating all their advantages and features.

3 TECHNOLOGY

HosetStone is not only about high-quality materials but also the best equipment and technologies. The special Proliner measuring device will ensure the accuracy of measurements on the object, while the Italian Breton equipment guarantees manufacturing accuracy. After that, our craftsmen will bring the product to perfection.

4 INDIVIDUAL APPROACH

We are ready to implement the most complex and creative ideas! You can always discuss your wishes with our managers, and together we will find a solution.

5 IN SEARCH OF INNOVATIONS

We are always looking for new materials and technologies and are open to experiments. If you have non-standard and interesting projects, please contact us. Let's be creative together!

6 WARRANTY

We provide a 30-year warranty service for our products from the moment of installation. You are choosing reliability by ordering countertops, sinks, and other HosetStone products.

One of the most durable furniture and finishing materials, created for longevity and beauty. The primary mineral composition of this material is a blend of refractory white clay, sand, and feldspar. However, each manufacturer has a unique formula, giving the material individual characteristics and appearance. This is why we encounter different names, such as MDi Inalco or Sintered stone Neolith, reflecting unique composition and production technology differences. Modern production technology ensures a non-porous structure, giving the material exceptional performance characteristics. At the same time, the material retains a certain flexibility, making it resistant to cracking and deformation during installation and use. This versatility allows it to be used in any application – from furniture components to interior and exterior cladding.

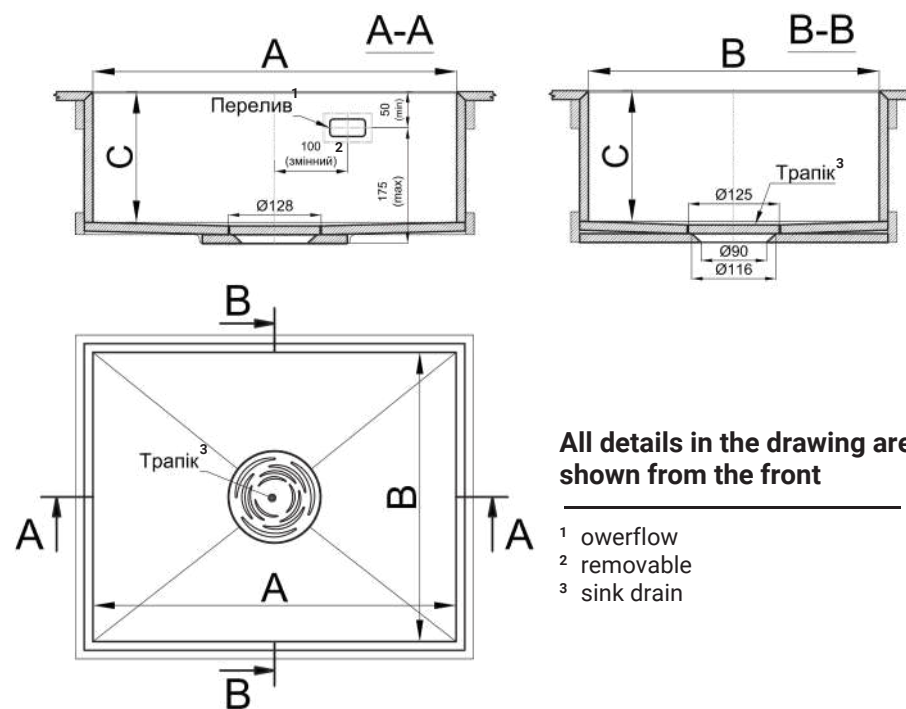

- Water resistance
- Wear resistance
- Heat resistance
- UV resistance
- Safety and hygiene
- Resistance to dirt and dyes

The background of the entire page is a high-resolution image of a marble surface. It features a complex pattern of veins in various shades of grey, black, and white, set against a light beige or cream-colored base. The veins are irregular and flowing, creating a natural, organic look. The lighting appears to come from the top, casting soft shadows and highlighting the texture of the stone.

A composite material that combines natural beauty with modern technology. This composite is 95% natural quartz, with the addition of polyester resins and color pigments. During production, the quartz granules are distributed manually, giving each sheet a unique pattern. The material offers all the advantages of natural stone: preserved texture on the edges, rich, natural shades, and an authentic imitation of natural stone colors. Thanks to its high density, this material is practical for maintenance, resistant to everyday stains, and easy to keep clean.

- High wear resistance
- Hygienic properties
- Easy care
- Long service life

PRODUCTION

COUNTERTOPS

Stone countertops are used in kitchens and bathrooms, where both aesthetics and durability are essential. Each product is crafted based on precise measurements and tailored to the client's needs. Thanks to modern stone processing technologies, we ensure perfect accuracy and durability of the products. We make sure that each worktop meets the highest quality standards and harmoniously integrates into the room's design.

WALL PANELS

Stone wall panels can be a significant addition to your interior. They enhance the walls' appearance and add strength and durability. We pay close attention to selecting materials for the panels to ensure they meet the project's aesthetic requirements and technical specifications. Production is carried out with strict adherence to standards, guaranteeing the perfect geometry of the product.

PRODUCTION

FURNITURE FRONTS

Stone furniture fronts are designed for those who want to realize unique interior solutions and keep up with the times. They are used in kitchens, bathrooms, dressing rooms, and other spaces where beauty and functionality must come together. Each front is carefully processed using our technologies to achieve high precision and durability. We take into account the individual requirements of each customer, providing the perfect blend of aesthetics and quality.

WINDOW SILLS

Stone window sills are designed for those who value durability and aesthetics. They are used in residential and commercial premises, providing high resistance to external factors. The production of window sills is carried out in compliance with strict standards to ensure that each product is resistant to various factors. We pay attention to every detail, which allows us to create window sills that last a long time and look flawless.
